

A miracle and a mighty blessing!

My father Gavin is now cured of his advanced stage metastatic gastric cancer the report confirming this came out Wednesday 6th April.

A testimony from Dominic and his family!

Dom and his family came to the Ministry of Awaken Together in Christ on Saturday 12th March 2022 after an initial cancer diagnosis report and PET-CT scan showed that his father had end-stage gastric cancer that had already spread to the liver and extensive multiple lymph nodes and was already reaching the lungs with an extremely poor prognosis overall. Two doctors one gastroenterologist and another gastro surgeon who specialises in removing cancers saw no hope in my dad's condition. They told my dad to enjoy his time left on this earth. The Awaken Team and Dom's family gathered together to hold a 24-hour prayer vigil pressing in praying and believing for a miracle.

After 3 months, on Friday 1st April 2022, Dom's father went for a second PET-CT scan to check on the progression of the cancer. During the next day at Awaken Prayer and Healing on Saturday 2nd April 2022, Dom heard his father receiving a prophetic word that he is cured of his cancer. This was four days prior to the PET-CT scan results and report being released on Wednesday of the following week. On Wednesday, upon seeing the results from the PET-CT scan, the words had been confirmed. Dom's father had been healed. The report showed that the cancer had resolved itself in all organs and also reflected significant marked regression of the spread to the lymph nodes.

'Just like how God had spoken through the prophetic word on Saturday night at Awaken (2nd April), my father is now cured of his advanced stage metastatic gastric carcinoma. The report came out today.' 'My sister and her friend are both doctors working at hospitals and both could not believe such a drastic change and contrast between the second and initial scans. This all took place only just over two months! My sister's friend's sister-in-law is an oncologist who even said that this kind of recovery never happens at all to 90% of people on long-term chemotherapy. Back in mid-January, when my sister and her friend had initially inspected the scans and report from the initial diagnosis, they had already lost hope and believed that my father's condition would only go downhill as that is the widely accepted prognosis in cancer patients with such a late-stage diagnosis. However, now my father has been healed and given a second chance and now believes God is real and that prayers are truly powerful.'
